ReadTemperatureAndHumidity ReflectionLog

(CSE2920 – Smart Phidgets) – Stefan Such

How has your program changed from planning to coding to now? Explain.

Unfortunately, my code can't be easily tested, because I don't have a way to change the humidity or temperature in the room today. Doesn't help that it's particularly hot and dry as I write this. `Humidity: 6.42 %RH, Temperature: 26.03 °C`

New code prints the humidity on temperature on the same line, like the old code did.

`Humidity is low! Temperature: 26.34 °C`
