(apologies for the change in file format; the Phidgets box requires that I use windows because the source for it's respective .jar file is contained within DLL format files.)

BlinkLED ReflectionLog

(CSE2920 – Simple Phidgets) – Stefan Such

How has your program changed from planning to coding to now? Explain.

This program was incredibly easy to write. I had to change one value from 1000 to 2000, replace a "while" loop with a "for" loop, and change a number from "1" to "4". The hardest part was probably looking at the box to see which port controls what, which took seconds.
